STUDENT ENROLLMENT & COURSE MANAGEMENT SYSTEM

(SECMS)

Salesforce Implementation – Step-by-Step Project Guide

TEAM LEADER	**KRISHNAMOORTHI.S**
MEMBER 1	**JULIYAS SISAR.A**
MEMBER 2	**JAYAVEL.S**

Prepared from the supplied SECMS project reference document. This guide is arranged so the team can build, verify, capture screenshots, and document each Salesforce milestone in order.

Project platform: Salesforce Lightning

1. PROJECT OVERVIEW

The Student Enrollment & Course Management System (SECMS) is a Salesforce application intended to centralize student, course, enrollment, instructor, approval, payment, reporting, and monitoring activities in one environment.

The supplied project describes a workflow that moves from student registration and course selection through enrollment request, fee payment, approval, instructor assignment, reporting, and completion.

Core Salesforce components

Component	Purpose
Student	Store student identity, contact and status information
Course	Store course name, category, duration, fee and description
Instructor	Store instructor code, expertise and contact information
Enrollment	Connect Student + Course + Instructor and track enrollment status/fees
Validation Rules	Prevent invalid student emails and unpaid approvals
Flows	Automate dates, notifications, instructor assignment and follow-up tasks
Approval Process	Route requested enrollments for manager approval/rejection
Reports & Dashboards	Monitor status, courses, approvals and revenue
Security	Control access through profiles, permission sets and sharing

Reference architecture: Salesforce Lightning UI → Salesforce Objects → Flows / Validation / Approval → Reports & Dashboards.

2. IMPLEMENTATION ROADMAP

Complete the project in the following order. Tick each item only after the corresponding Salesforce configuration has been saved and tested.

[ ]	1	Salesforce Developer Account	Create and activate the Salesforce org
[ ]	2	Custom Objects	Student, Course, Instructor, Enrollment
[ ]	3	Fields	Create required fields and data types
[ ]	4	Relationships	Enrollment lookups to Student, Course and Instructor
[ ]	5	Validation Rules	Email domain + fee approval validation
[ ]	6	Approval Process	Requested → Training Manager → Approved/Rejected
[ ]	7	Tabs	Student, Course, Instructor, Enrollment
[ ]	8	Lightning App	Student Enrollment & Course Management
[ ]	9	Page Layouts & Record Types	New Enrollment / Re-Enrollment
[ ]	10	Flows	Date, approval notification, instructor assignment, task
[ ]	11	Reports	Status, course, pending approvals, revenue
[ ]	12	Dashboard	Charts, gauge and pending-approval table
[ ]	13	Security	Profiles, permission sets, sharing / OWD
[ ]	14	Testing & Conclusion	Capture evidence and final documentation

Milestone 1 – Salesforce Developer Account

Objective: Create and activate the Salesforce Developer org used for the SECMS implementation.

Use the supplied reference workflow for developer-account creation. The signup form uses your name, email, role, college/company details, country, postal code and a Salesforce username.

1. Open the Salesforce Developer signup page.
2. Enter First Name and Last Name.
3. Enter the email address you will use for account verification.
4. Choose the Developer role.
5. Enter your college name in the company field, India as country, and your postal code.
6. Create a unique Salesforce username in the required username format.
7. Submit the signup form.
8. Open the verification email and click Verify Account.
9. Set the password and security question.
10. After activation, open the Salesforce Setup page.

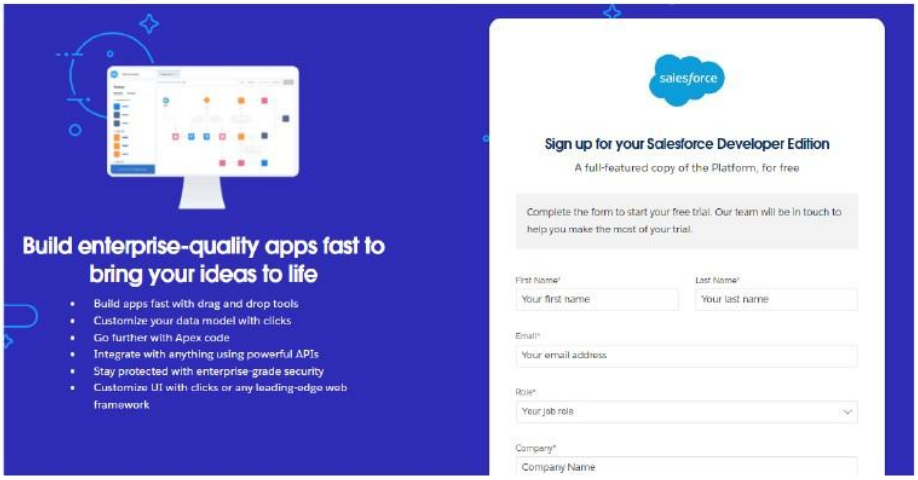

Example screenshot – reference page 16

What Is Salesforce?

Salesforce is your customer success platform, designed to help you sell, service, market, analyze, and connect with your customers.
Salesforce has everything you need to run your business from anywhere. Using standard products and features, you can manage relationships with prospects and customers, collaborate and engage with employees and partners, and store your data securely in the cloud. So what does that really mean? Well, before Salesforce, your contacts, emails, follow-up tasks, and prospective deals might have been organized something like this:
https://youtu.be/r9EX3lGde5k

Activity 1: Creating Developer Account:

Creating a developer org in salesforce.
Go to https://developer.salesforce.com/signup
On the sign up form, enter the following details :

First name & Last name
Email
Role : Developer

Use this as the visual reference for the developer signup and activation screens. Capture your own screenshot after your account is successfully activated.

[ ] Developer org created [ ] Email verified [ ] Password set [ ] Setup page opened

Milestone 2 – Custom Objects

Objective: Create the four core custom objects used by SECMS.

---

1. Go to Setup → Object Manager.

2. Click Create → Custom Object.
3. Create the Student object: Label = Student; Plural Label = Students; Object Name = Student; Record Name = StudentName; Data Type = Text.
4. Enable Allow Reports and, if desired, Allow Activities and Track Field History.
5. Enable Allow Search and click Save.
6. Repeat the object-creation process for Course, Instructor and Enrollment.
7. Confirm all four objects appear in Object Manager.

Objects to verify: Student__c, Course__c, Instructor__c and Enrollment__c.

Example screenshot – reference page 19

Milestone 2 – Objects:

Activity 1: Creating Student Object:

The purpose of creating the Student custom object is to store and manage information about students such as their personal details, contact information, and enrollment status.

To create the Student object:

Go to the Setup page.

Click on Object Manager.

Click on Create → Custom Object.

Enter the details as below:

1. Label: Student
2. Plural Label: Students
3. Object Name: Student
4. Record Name: Student Name
5. Data Type: Text
6. Under Optional Features, select:
7. Allow Reports
8. Allow Activities (optional but recommended)
9. Track Field History (optional, if you want)
10. Under Search Status, select:
11. Allow Search
12. Click Save.

The reference page shows the Student custom-object configuration. Use the same pattern for the other three objects, changing the label and object name.

[ ] Student [ ] Course [ ] Instructor [ ] Enrollment

Milestone 3 – Fields

Objective: Add the fields required to store student, course, instructor and enrollment data.

Student

Field	Type
Student Name	Text (Standard)
Email	Email
Phone	Phone
Date of Birth	Date
Student Status	Picklist
Address	Text Area

Course

Field	Type
Course Name	Text (Standard)
Category	Picklist
Duration	Number/Text
Course Fee	Currency
Description	Text Area

Instructor

Field	Type
Instructor Name	Text (Standard)
Instructor Code	Text
Expertise	Picklist
Phone	Phone
Email	Email

Enrollment

Field	Type
Student	Lookup (Student)
Course	Lookup (Course)
Instructor	Lookup (Instructor)
Enrollment Date	Date
Enrollment Status	Picklist
Fees Paid	Checkbox
Total Amount	Currency
Comments	Text Area

Tip: When creating picklists, use the exact status/category values required by your project flows and validation rules.

[ ] All Student fields [ ] All Course fields [ ] All Instructor fields [ ] All Enrollment fields

Milestone 4 – Relationships

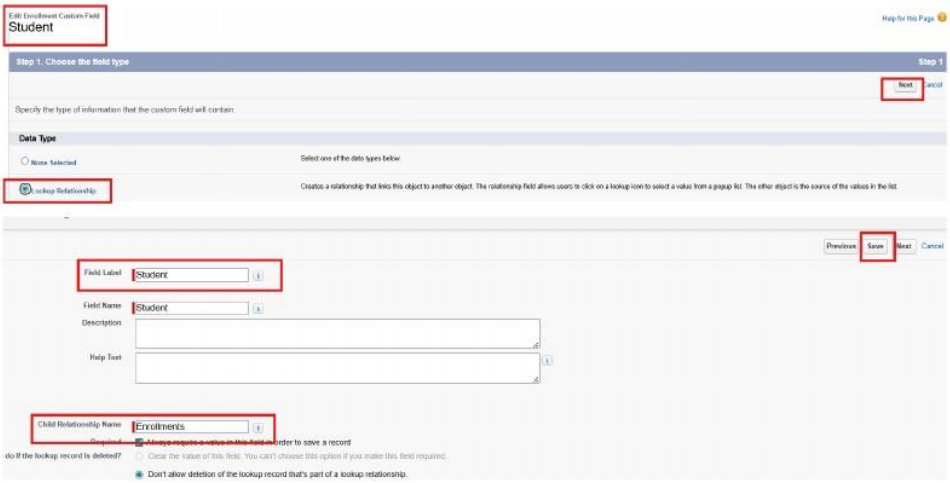

Objective: Connect Enrollment records to Student, Course and Instructor using Lookup Relationships.

---

1. Go to Setup → Object Manager → Enrollment__c.
2. Open Fields & Relationships → New.
3. Select Lookup Relationship → Next.
4. For Student, choose Related To = Student__c, set Field Label = Student, then save.
5. Repeat for Course: Related To = Course__c, Field Label = Course.
6. Repeat for Instructor: Related To = Instructor__c, Field Label = Instructor.
7. Confirm the three lookup fields are visible on the Enrollment layout.

Example screenshot – reference page 24

6. Enter Field Label: Student (API Name: Student__c).
7. Click Next through Field-Level Security and Layout options (ensure it's visible and added to layout).
8. Click Save.

Activity 2: Create Lookup from Enrollment to Course

Purpose:
To link each Enrollment to a Course.

Steps:

1. Go to Setup → Object Manager → Enrollment__c.
2. Click Fields & Relationships → New.
3. Select Lookup Relationship → Next.
4. Related To: select Course__c → click Next.
5. Field Label: Course (API Name: Course__c).
6. Click Next (set visibility and layout) → Save.

The reference screenshot demonstrates the Enrollment → Student lookup. Repeat the same Salesforce flow for Course and Instructor.

[ ] Enrollment → Student [ ] Enrollment → Course [ ] Enrollment → Instructor

Milestone 5 – Validation Rules

Objective: Prevent invalid student email addresses and stop approval when fees are unpaid.

Activity A – Student Email Domain Validation

1. Setup → Object Manager → Student__c → Validation Rules → New.

2. Rule Name: Student_Email_Domain_Validation.
3. Formula: NOT(CONTAINS(Email__c, "@student.edu")).
4. Error Message: Email must be a valid student institutional email.
5. Error Location: Email__c → Save.

Activity B – Fees Must Be Paid Before Approval

1. Setup → Object Manager → Enrollment__c → Validation Rules → New.
2. Rule Name: Fees_Must_Be_Paid_Before_Approval.
3. Use the condition: AND(ISPICKVAL(Enrollment_Status__c, "Approved"), Fees_Paid__c = FALSE).
4. Error Message: Fees must be paid before approving an enrollment.
5. Choose the error location and Save.

Example screenshot – reference page 27

Milestone 5 – Validation Rules:

Activity 1: Student Email Domain Validation

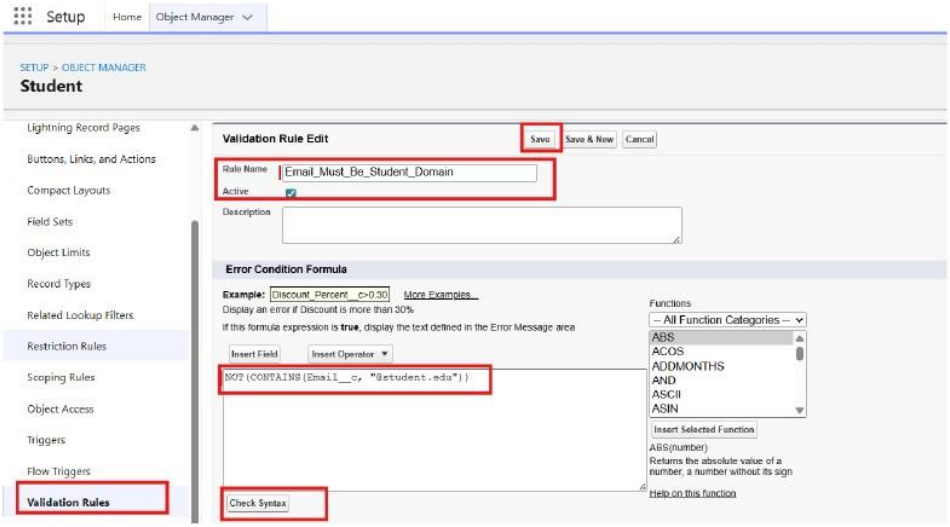

Purpose:
To ensure students use only allowed institutional email addresses.

Steps:

Go to Setup → Object Manager → Student__c.
Click Validation Rules → New.
Rule Name: Student_Email_Domain_Validation.
Error Condition Formula: (example for @student.edu)

- NOT(CONTAINS(Email__c, "@student.edu"))

Error Message: Email must be a valid student institutional email.
Error Location: Field → Email__c.
Click Save.

Use the reference validation-rule screen to check the rule name, formula and error-message areas.

[ ] Email rule tested [ ] Unpaid approval rule tested [ ] Valid record saves successfully

Milestone 6 – Approval Process

Objective: Route Requested enrollment records to a Training Manager for approval or rejection.

---

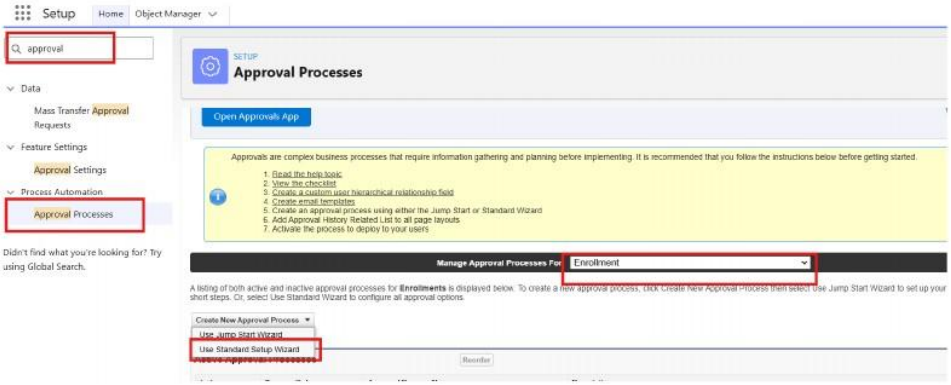

1. Go to Setup → Approval Processes → select Enrollment__c.
2. Choose Create New Approval Process → Use Standard Setup.

3. Process Name: Approval_Enrollment_Request.
4. Entry Criteria: Enrollment_Status__c = "Requested".
5. Add an approval step and select the specific Training Manager user.
6. Final Approval Action: update Enrollment_Status__c to "Approved".
7. Final Rejection Action: update Enrollment_Status__c to "Rejected".
8. Add an Email Alert for rejection notification to the student.
9. Activate the approval process.

Example screenshot – reference page 30

Steps:

1. Go to Setup → Approval Processes → select Enrollment__c.
2. Click Create New Approval Process → Use Standard Setup.
3. Process Name: Approval_Enrollment_Request.
4. Entry Criteria: Enrollment_Status__c = "Requested".
5. Save and configure steps.

Approval Process Edit

Approval Enrollment Request

The supplied reference shows the standard approval-process configuration and entry criteria.

[ ] Entry criteria configured [ ] Approver selected [ ] Approved update [ ] Rejected update [ ] Email alert [ ] Activated

Milestone 7 – Custom Tabs

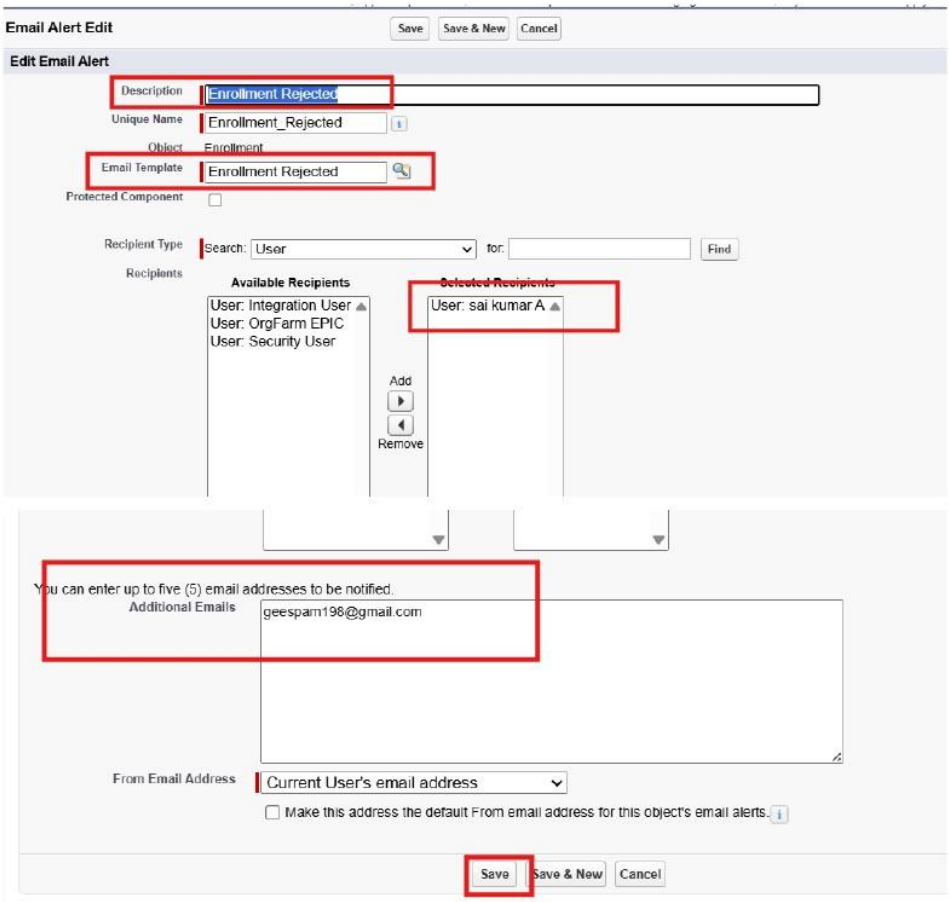

Objective: Create navigation tabs for the four custom objects.

---

1. Go to Setup and search for Tabs.
2. Under Custom Object Tabs, click New.

3. Select Student and choose a tab style.
4. Click Next, assign visibility as required, and Save.
5. Repeat the same process for Course, Instructor and Enrollment.
6. Open the app navigation and confirm all four tabs are available.

Example screenshot – reference page 33

13. Activate the approval process.

Milestone 7- Tabs

Activity 1: Creating a Tab for the Student Object:

Go to Setup.

1. In the Quick Find box, type Tabs.
2. Under Custom Object Tabs, click New.
3. Select Student from the object list.

The reference screenshot demonstrates creation of a custom object tab. Repeat for Course, Instructor and Enrollment.

[ ] Student tab [ ] Course tab [ ] Instructor tab [ ] Enrollment tab

Milestone 8 – Lightning App

Objective: Create the central Salesforce Lightning application for SECMS.

---

1. Go to Setup → App Manager.
2. Click New Lightning App.

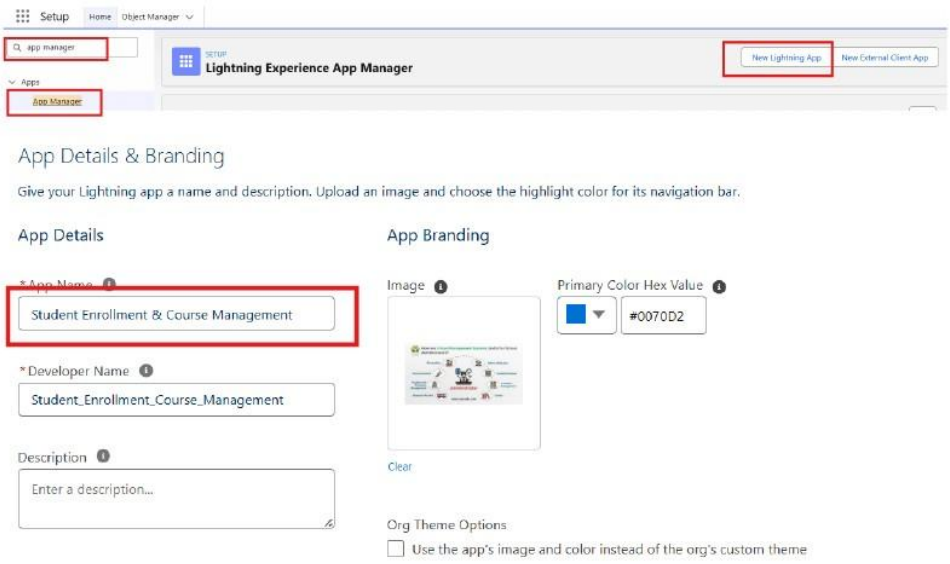

3. App Name: Student Enrollment & Course Management.
4. Review the auto-filled Developer Name and optionally add a description.
5. Choose branding if required and select Standard Navigation.
6. Assign the app to the required profiles, such as Admin, Enrollment Officer and Instructor.
7. Add these navigation items: Student, Course, Instructor, Enrollment, Reports, Dashboards, Home and Tasks.
8. Review the configuration and click Save & Finish.
9. Launch the new app and verify the navigation tabs.

Example screenshot – reference page 35

Provide the app details:
App Name: Student Enrollment & Course Management
Developer Name auto-fills
Description: Optional, but can describe the purpose of the app
Click Next and choose the following settings:
App Branding (optional): Add logo or select color theme
Navigation Style: Choose Standard Navigation
Click Next and assign the app to specific profiles (e.g., **Admin, Enrollment Officer, Instructor**).
Click Next to select the items (tabs) to be included in the app. Add:

1. Student
2. Course
3. Instructor
4. Enrollment
5. Reports
6. Dashboards
7. Home
8. Tasks

Click Next and review the app settings.
Finally, click Save & Finish.

This reference page shows the app-name, navigation and item-selection stages for the SECMS Lightning app.

[ ] App created [ ] Profiles assigned [ ] Navigation items added [ ] App launched

Milestone 9 – Page Layouts & Record Types

Objective: Separate New Enrollment and Re-Enrollment experiences and expose Enrollment related lists on parent objects.

Activity A – Record Types

1. Setup → Object Manager → Enrollment__c → Record Types → New.
2. Create New Enrollment using Master as the existing record type.
3. Enable it for the required profiles and select the default page layout.
4. Create a second record type named Re-Enrollment with the same profile approach.

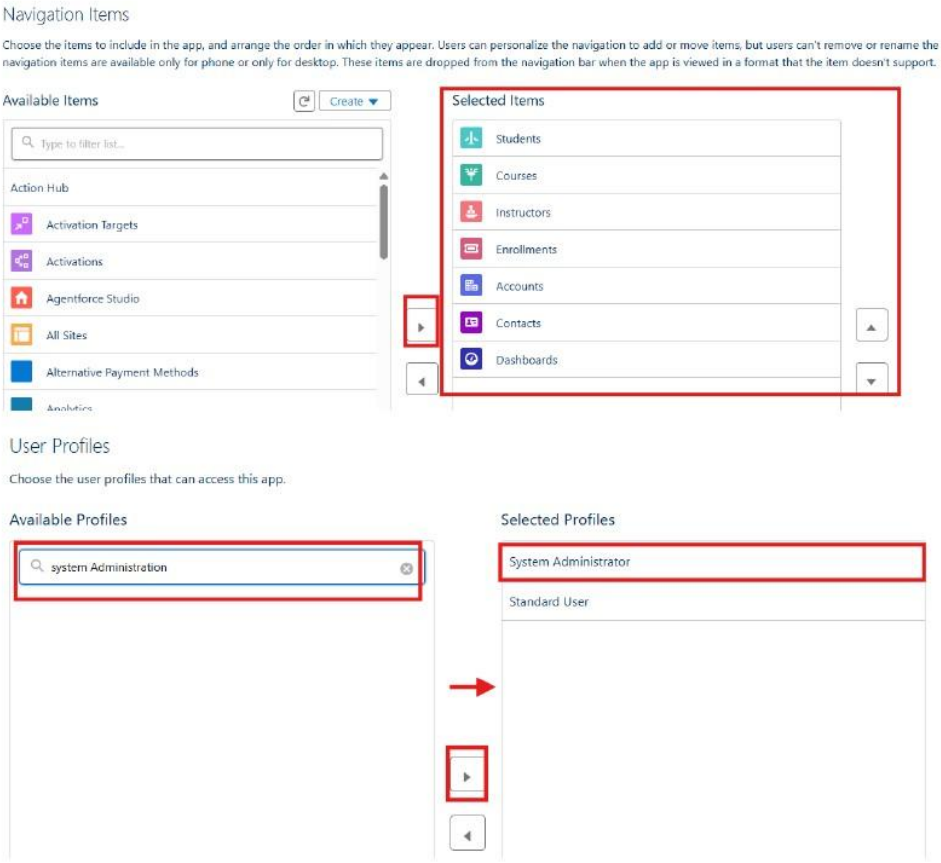

Activity B – Page Layouts

1. Open Enrollment__c → Page Layouts.
2. Clone the existing layout and create New Enrollment Layout.
3. Keep fields needed for first-time enrollment such as Student, Course, Instructor, Enrollment Date, Status and Fees.
4. Clone again and create Re-Enrollment Layout.
5. Include any previous-enrollment reference, re-enrollment reason, status and fees as required.
6. Use Page Layout Assignment to map each record type to its matching layout.

Activity C – Enrollment Related Lists

1. Open Student__c → Page Layouts → main layout → Related Lists.
2. Drag Enrollments onto the Student layout and Save.
3. Repeat for Course__c and Instructor__c.

Example screenshot – reference page 36

Milestone 9 – Page Layouts and Record:

Activity 1: Create Record Types for Enrollment:

Purpose:
To separate New Enrollment vs Re-Enrollment processes.
Steps:
1.Go to Setup → Object Manager → Enrollment__c.

The reference shows the page-layout creation stage. The supplied document also specifies related-list configuration for Student, Course and Instructor.

[ ] New Enrollment record type [ ] Re-Enrollment record type [ ] Matching layouts [ ] Related lists

Milestone 10 – Automation with Flow

Objective: Automate enrollment dates, approval notifications, instructor assignment and follow-up tasks.

Activity 1 – Auto-Populate Enrollment Date

1. Setup → Flows → New Flow → Record-Triggered Flow.
2. Object = Enrollment__c; trigger when a record is created.
3. Optimize for Actions and Related Records.
4. Add Update Records → Label: Set Enrollment Date.
5. Use the triggering record and set Enrollment_Date__c = $Flow.CurrentDate.
6. Save as SetEnrollmentDate and Activate.

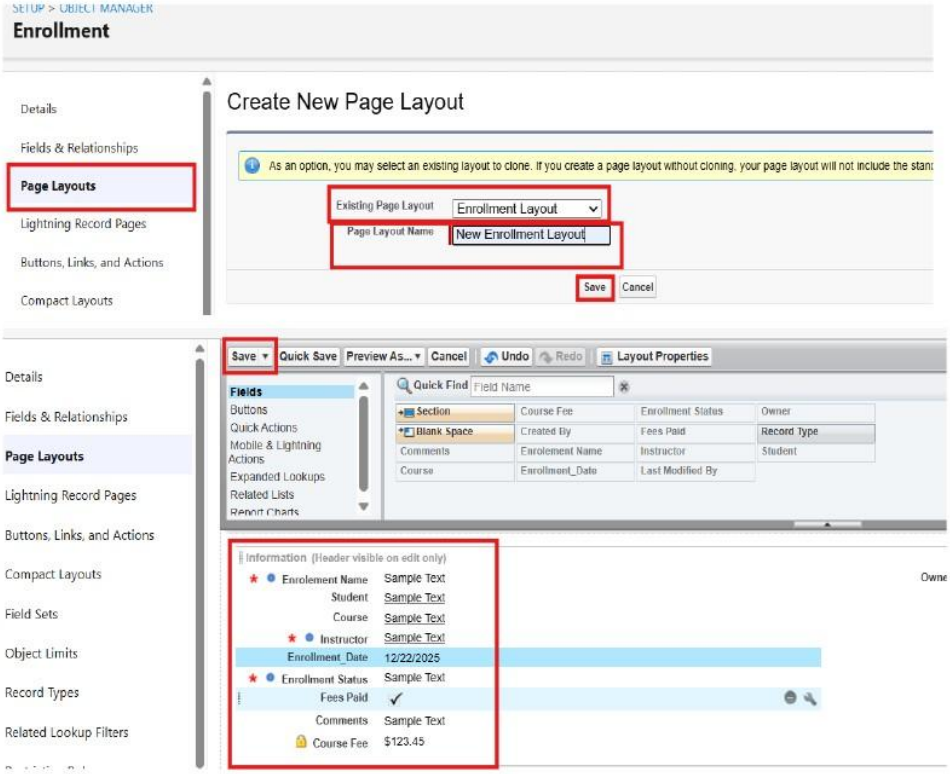

Example screenshot – reference page 38

Purpose:
To show different fields for New Enrollment vs Re-Enrollment.

Steps:

1.Enrollment__c object → click Page Layouts.
2.Click New to create a layout for New Enrollment:

- Clone from existing Enrollment Layout → name it New Enrollment Layout → Save.
- Keep fields relevant for first-time enrollment: Student, Course, Instructor, Enrollment Date, Status, Fees, etc.
- Remove unnecessary re-enrollment fields if any.
- Click Save.

3.Again, click New to create Re-Enrollment Layout:

Use the supplied reference screenshot as a visual example of the Flow configuration.

Activity 2 – Email When Enrollment Is Approved

1. Create the required Email Template and Email Alert.
2. Create a Record-Triggered Flow on Enrollment__c for record updates.
3. Condition: Enrollment_Status__c Equals "Approved".
4. Get the related Student__c record.

5. Add the Email Alert action and, if required, an Admin notification.

6. Update the related Student status to Active.

7. Save as Enrollment Approved Action and Activate.

Example screenshot – reference page 40

Activity 3: Enrollment R Addelated Lists to Parent Objects:

Purpose:
To see all Enrollments from Student, Course, and Instructor records.
a) Student → Enrollment Related List
Go to Setup → Object Manager → Student__c.
Click Page Layouts → open the main layout.
In the palette, select Related Lists.
Drag Enrollments related list onto the layout.
Customize columns if needed → Save.
b) Course → Enrollment Related List
Go to Object Manager → Course__c → Page Layouts.
Open layout → add Enrollments related list.
Save.
c) Instructor → Enrollment Related List
Go to Object Manager → Instructor__c → Page Layouts.
Open layout → add Enrollments related list.
Save.

Milestone 10 – Automation with Flow

Activity 1: Auto-Populate Enrollment Date (Record-Triggered Flow)

Purpose:
Set Enrollment_Date__c to today when Enrollment is created.

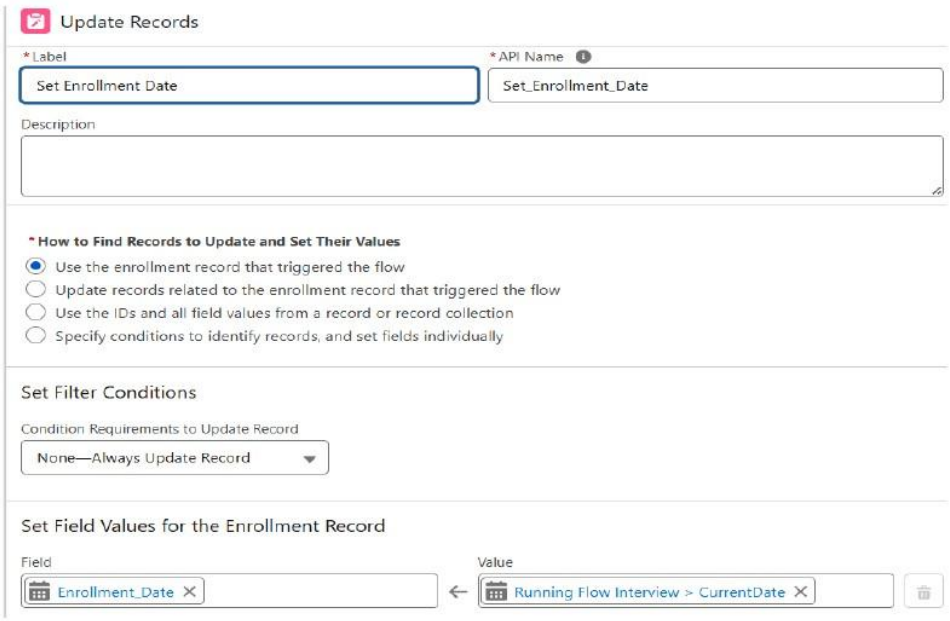

Use the supplied reference screenshot as a visual example of the Flow configuration.

Activity 3 – Auto-Assign Instructor

1. Prepare instructor records such as INSTR_A, INSTR_B and INSTR_C.
2. Create a Record-Triggered Flow on Enrollment__c for create/update.
3. Get the related Course__c record.
4. Use a Decision on Course Category: Technical, Language or Non-Technical.
5. For each outcome, get the matching Instructor record.
6. Update Enrollment.Instructor__c with the selected instructor Id.
7. Save as AutoAssign_Instructor and Activate.

Example screenshot – reference page 42

7.Save as SetEnrollmentDate → Activate.

Activity 2: Send Email When Enrollment Approved

Purpose:
When Enrollment_Status__c = Approved, send email, alert admin, and set Student to Active.
Steps (high level for document):

1. Create Email Template and Email Alert for student notification.

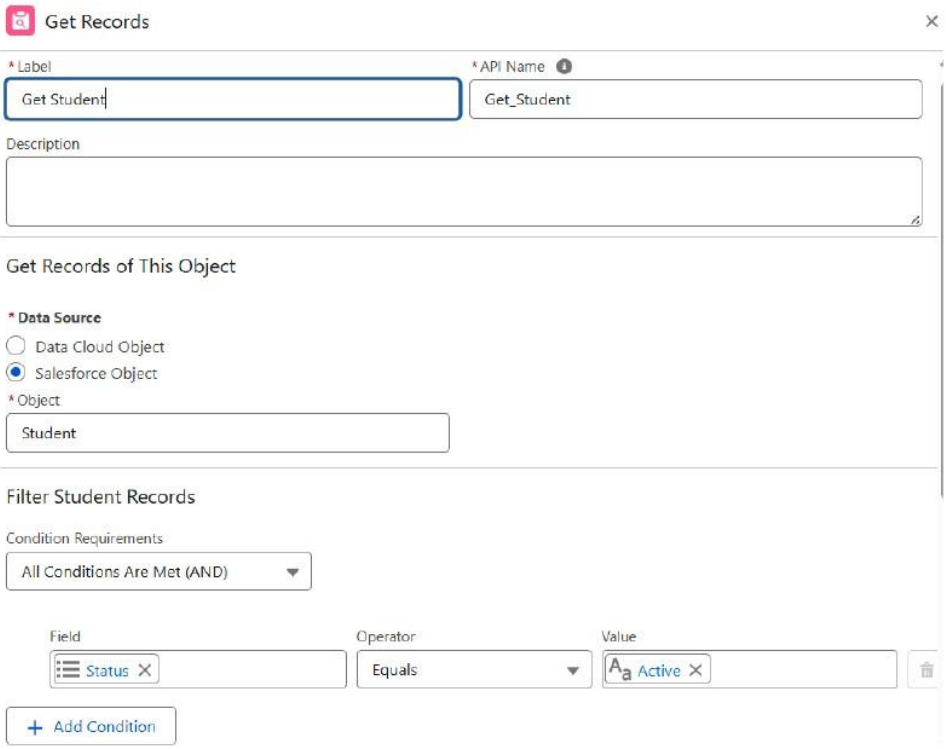

Use the supplied reference screenshot as a visual example of the Flow configuration.

Activity 4 – Follow-Up Task

1. Create a Record-Triggered Flow on Enrollment__c.
2. Condition: Enrollment_Status__c = "Requested".
3. Get the Admin user.
4. Create a due-date formula using TODAY() + 2.

5. Create a Task with Subject = Follow up on enrollment request.
6. Set OwnerId to the Admin user, WhatId to the Enrollment Id, and ActivityDate to the formula.
7. Save as Create_Followup_Task and Activate.

Example screenshot – reference page 44

6. Add Action (Email Alert) to send email to student.

Use the supplied reference screenshot as a visual example of the Flow configuration.

[ ] Enrollment date flow [ ] Approval email flow [ ] Instructor assignment flow [ ] Follow-up task flow

Milestone 11 – Reports

Objective: Create operational reports for student status, course enrollment, pending approvals and paid revenue.

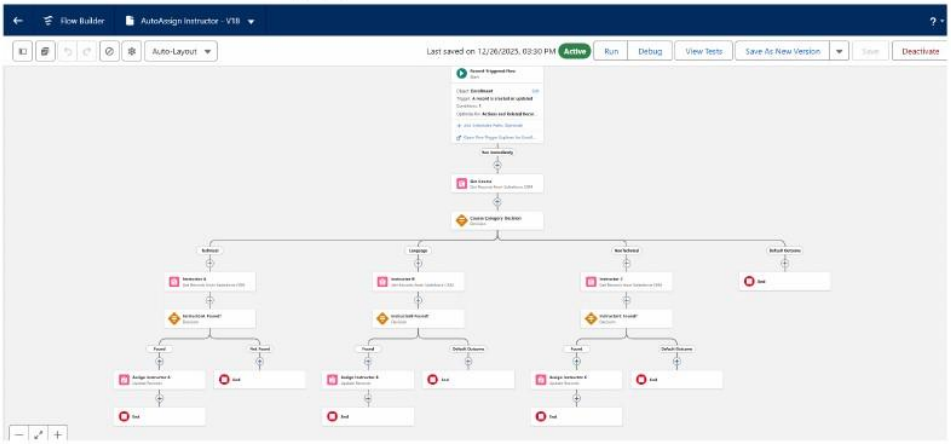

Students by Status

1. Reports → New Report.
2. Select the Students report type.
3. Group rows by Status__c.
4. Add Name, Email and Phone columns as needed.
5. Save as Students by Status.

Example screenshot – reference page 47

Steps:

1. Prepare Instructor__c records with codes (e.g., INSTR_A, INSTR_B, INSTR_C).
2. Create Record-Triggered Flow on Enrollment__c (created/updated).
3. Add Get Records to fetch related Course__c.
4. Add Decision element on Course__r.Category__c:
5. Technical / Language / Non-Technical outcomes.
6. For each outcome:
7. Get Instructor record (A/B/C) based on code or name.
8. Update Records: set Instructor__c = Get_Instructor_X.Id.
9. Save as AutoAssign_Instructor → Activate.

Activity 4: Auto-Create Task for Follow-Up

Purpose:
When Enrollment is “Requested”, create a follow-up task for Admin.

Reference screenshot from the supplied project document. After saving, run the report and capture your own result for the final evidence.

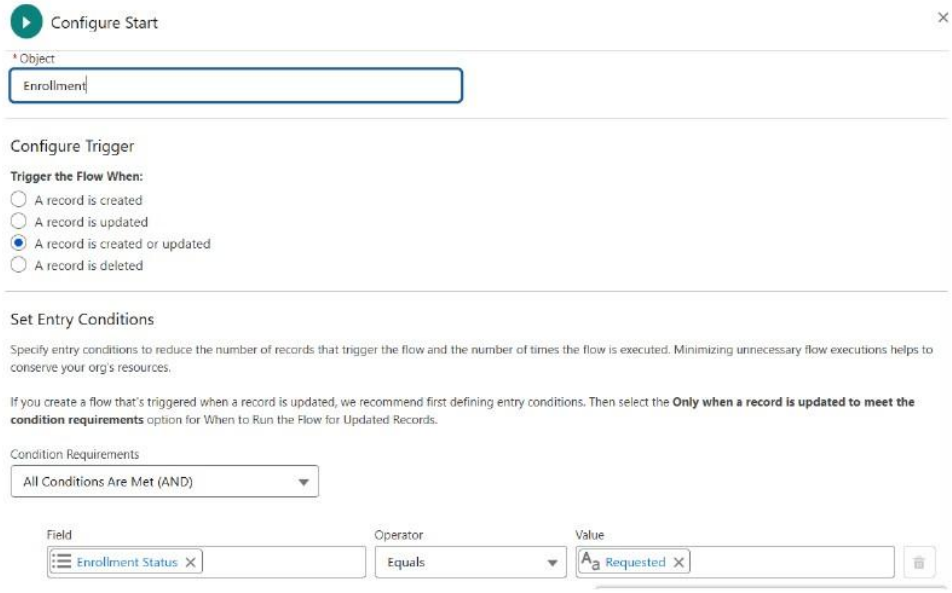

Enrollments by Course

1. Create a new Enrollments report.
2. Group rows by Course__r.Name.
3. Show the record count per course.
4. Save as Enrollments by Course.

Example screenshot – reference page 48

Steps:

1. Create Record-Triggered Flow on Enrollment__c.
2. Trigger: Record created or updated; condition Enrollment_Status__c = "Requested".

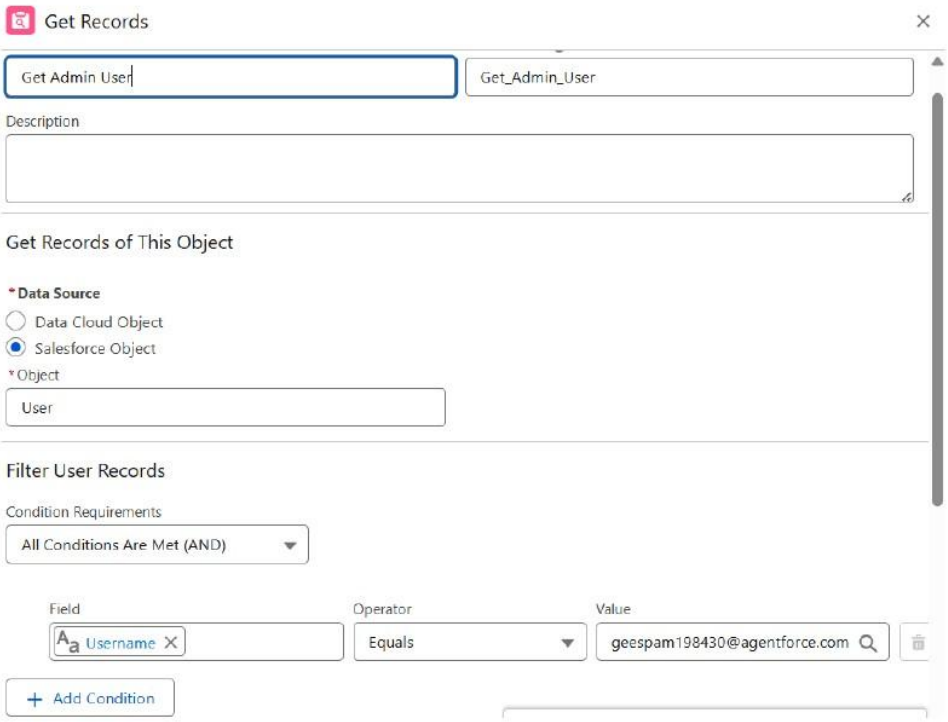

3. Add Get Records to fetch Admin user (by Username / Profile).
4. Add Formula (Date): TODAY() + 2 for due date.

Reference screenshot from the supplied project document. After saving, run the report and capture your own result for the final evidence.

Pending Enrollment Approvals

1. Create a new Enrollments report.
2. Filter Enrollment_Status__c = "Requested".
3. Add Student, Course, Owner and Created Date.
4. Save as Pending Enrollment Approvals.

Example screenshot – reference page 49

5. Add Create Records for Task:
6. Subject: Follow up on enrollment request.
7. OwnerId: Admin user Id.
8. WhatId: Enrollment Id.
9. ActivityDate: formula Today + 2.

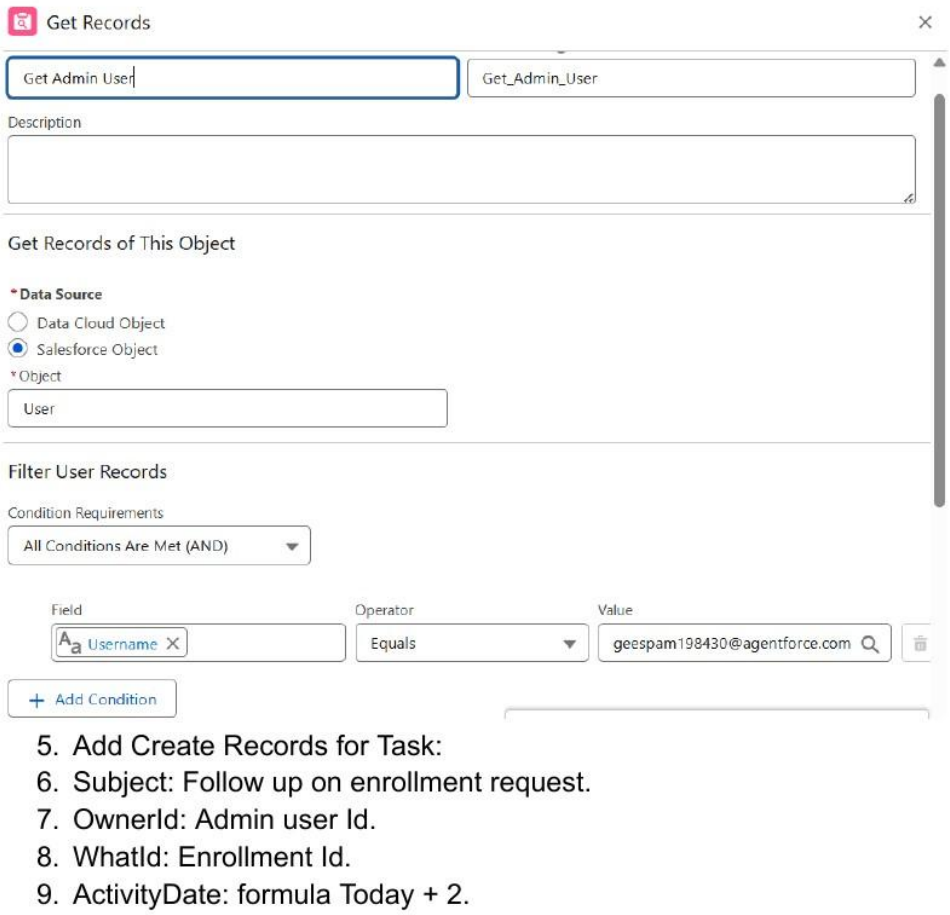

Reference screenshot from the supplied project document. After saving, run the report and capture your own result for the final evidence.

Revenue Report – Fees Paid

1. Create a new Enrollments report.
2. Filter Fees_Paid__c = TRUE.
3. Group by Course__r.Name.
4. Summarize Course_Fee__c or the corresponding fee field.

5. Save as Revenue Report – Fees Paid.

Example screenshot – reference page 49

Reference screenshot from the supplied project document. After saving, run the report and capture your own result for the final evidence.

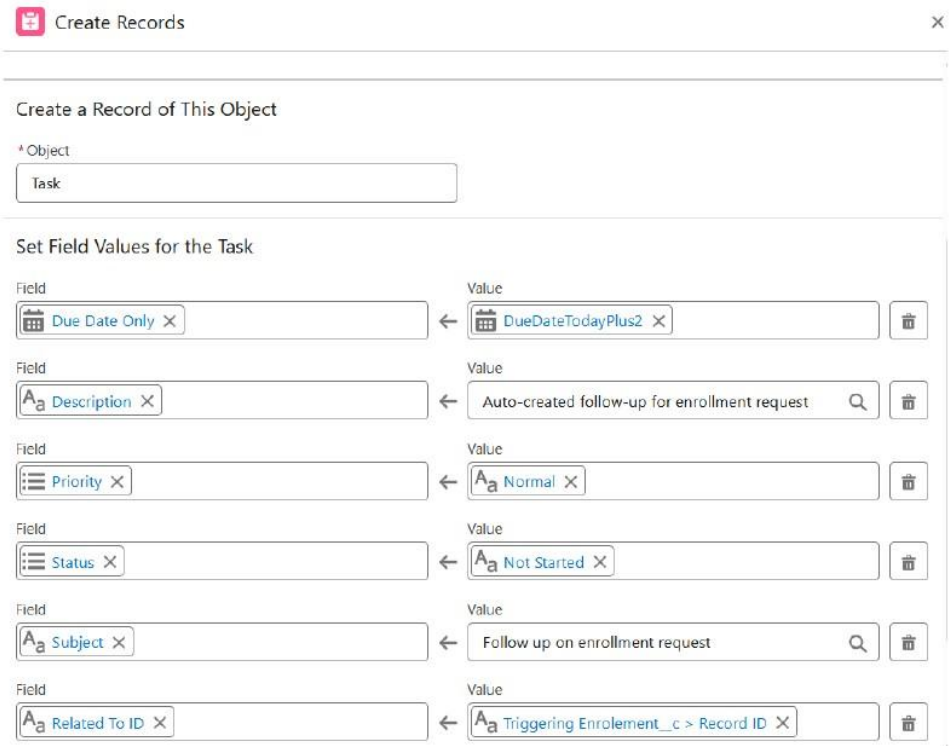

[ ] Students by Status [ ] Enrollments by Course [ ] Pending Enrollment Approvals [ ] Revenue Report – Fees Paid

Milestone 12 – Dashboard

Objective: Build a Student Management Dashboard from the reports created in Milestone 11.

1. Go to Dashboards → New Dashboard.
2. Name the dashboard Student Management Dashboard.
3. Choose the dashboard folder and create/save it.
4. Add a Donut Chart using Students by Status.
5. Add a Bar Chart using Enrollments by Course.
6. Add a Gauge using Revenue Report – Fees Paid and the revenue summary.
7. Add a Table using Pending Enrollment Approvals.
8. Arrange the components on the canvas.
9. Click Save → Done and verify the dashboard refreshes correctly.

Example screenshot – reference page 50

10. Save as Create_Followup_Task → Activate.

Milestone 11 – Reports:

Activity 1: Create “Students by Status” Report

1.Go to **Reports → New Report**.
2.Report Type: `Students`.
3.Group rows by `Status__c`.
4.Add columns as needed (Name, Email, Phone).
5.Save as `Students by Status`.

The supplied dashboard reference shows the dashboard creation stage; page 51 shows the component/security context. Use your own final dashboard screenshot in the submission.

[ ] Dashboard created [ ] Donut [ ] Bar [ ] Gauge [ ] Table [ ] Final dashboard screenshot

Milestone 13 – Security Setup

Objective: Control access using profiles, permission sets and organization-wide sharing settings.

Activity A – Profiles

1. Go to Setup → Profiles and create/clone the required profiles.
2. Admin: full access to the application.
3. Enrollment Officer: Create/Read/Edit access for Enrollment and required Student/Course access.
4. Instructor: Read-only access to the enrollments they are allowed to see.
5. Save and verify object permissions.

Activity B – Permission Sets

1. Setup → Permission Sets → New.
2. Create Custom Object Access if additional project-object access is needed.
3. Create Dashboard Editor for users who need report/dashboard creation or customization.
4. Assign the permission sets to the relevant users.

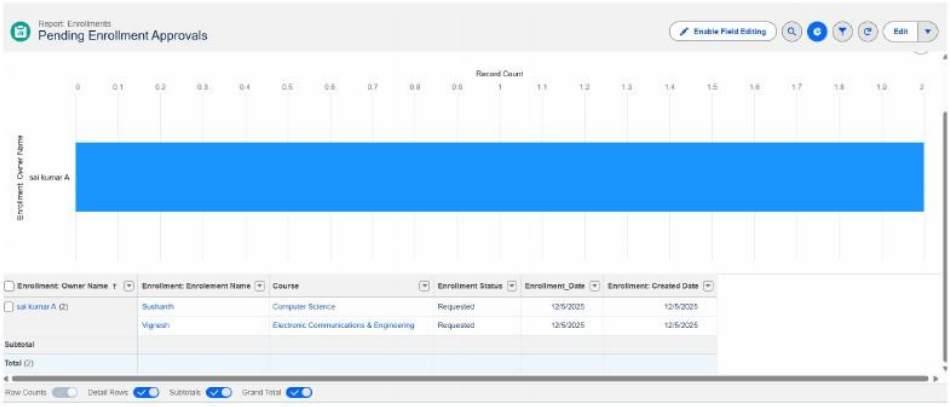

Activity C – Sharing & OWD

1. Setup → Sharing Settings.
2. Set Student__c = Public Read/Write.
3. Set Course__c = Public Read/Write.
4. Set Enrollment__c = Private.
5. Save the sharing settings.
6. If instructor-specific access is implemented, use the optional Instructor User lookup and flow approach described inthe project.

Example screenshot – reference page 52

Activity 3: Create “Pending Enrollment Approvals” Report

1. New Report → Enrollments report type.
2. Filter: Enrollment_Status__c = "Requested".
3. Add columns (Student, Course, Owner, Created Date).
4. Save as Pending Enrollment Approvals.

Activity 4: Create “Revenue Report (Fees Paid)” Report

1. New Report → Enrollments report type.
2. Filter: Fees_Paid__c = TRUE.
3. Group by Course__r.Name.
4. Summarize Course_Fee__c or similar fee field.
5. Save as Revenue Report – Fees Paid.

The reference security page summarizes profile permissions, permission sets, sharing and OWD configuration.

[ ] Admin profile [ ] Enrollment Officer profile [ ] Instructor profile [ ] Permission sets [ ] OWD/sharing

Milestone 14 – Testing, Evidence & Final Documentation

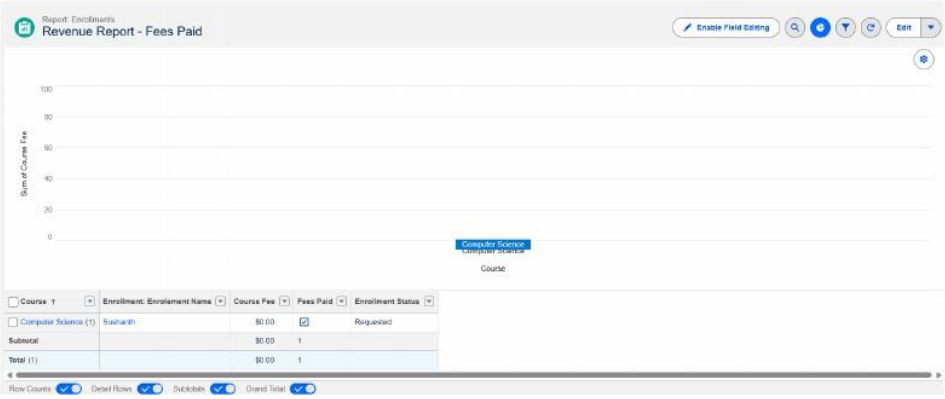

Objective: Verify that every implemented feature works and capture screenshots for submission.

The supplied project specifically calls for testing evidence from the Salesforce user interface. Test the main records, validation rules, record types, flows, approval behavior, reports and dashboards.

Recommended evidence checklist

1. Create a Student record and verify the fields.
2. Create Course and Instructor records.
3. Create an Enrollment and verify Student/Course/Instructor lookups.
4. Test the invalid student-email case and confirm the validation message.
5. Test an enrollment approval attempt with Fees Paid = false and confirm the validation rule.
6. Test the Requested → Approval → Approved/Rejected path.
7. Verify the Enrollment Date flow.
8. Verify the approval email/notification flow.
9. Verify automatic instructor assignment.
10. Verify the follow-up Task creation.
11. Run all four reports and confirm the records/aggregations.
12. Open the Student Management Dashboard and verify all components.
13. Test the security configuration with the intended user profiles.
14. Capture clear screenshots for each completed feature and keep them in the final project documentation.

Example screenshot – reference page 53

Milestone 12 – Dashboards:

Activity 1: Create "Student Managemet Dnashboard"

Steps:

1. Go to **Dashboards** → **New Dashboard**.
2. Name: Student Management Dashboard.

3. Select folder → **Create**.
4. Select the new Dashboard folder and Save.

Add components:

- **Donut Chart** → using Students by Status report.
- **Bar Chart** → using Enrollments by Course report.

The final reference pages contain the project conclusion, advantages/disadvantages and future-scope material. Add your own testing screenshots before final submission.

[ ] Functional testing complete [ ] Performance checks complete [ ] Screenshots collected [ ] Final report ready

15. FINAL TEAM SUBMISSION CHECKLIST

Before submission/demo, confirm that the Salesforce org and the written project document agree with each other.

[ ] Salesforce Developer org is active.

[ ] Four custom objects exist.

[ ] Required fields and picklists are configured.

[ ] Enrollment lookup relationships are working.

[ ] Validation rules have been tested.

[ ] Approval process is active and testable.

[ ] Four custom tabs are visible.

[ ] SECMS Lightning App is available.

[ ] Enrollment record types and page layouts are assigned.

[ ] All required flows are active.

[ ] Four reports are saved and returning data.

[ ] Student Management Dashboard is saved.

[ ] Profiles, permission sets and sharing settings are configured.

[ ] Testing screenshots are organized.

[ ] Final project PDF contains team details, implementation steps and evidence.

Team

Role	Name
Leader	Dinesh.K
Member	Rajavel.R
Member	Iyyappan.S

Reference note: This guide is based on the supplied “Student Enrollment & Course Management System (SECMS)” project document and keeps its milestone order, Salesforce objects, field names, automation names, reports, dashboard components and security approach.

Thank You
